

REPORT

The analysis of 25,029 orders shows total sales revenue of 12,635,222, with an average order value of approximately 246.44. The findings indicate that technology products, particularly smartphones and related products, are major contributors to overall business performance.

1. Technology Products Are Major Revenue Drivers

Technology is the leading product category, contributing approximately 37.54% of total sales. Within the technology portfolio, phones and copiers are among the strongest-performing sub-categories. Smartphone brands such as Apple, Cisco, Motorola, and Nokia are significant revenue contributors, highlighting strong demand for technology products.

2. Central and South Regions Show Strong Sales Performance

The Central and South regions are among the top-performing regions in terms of sales. This suggests that these regions represent important markets and should be closely monitored for continued growth and customer demand.

3. APAC Is the Leading Market

The APAC market generates approximately 3.582 million in revenue, making it the leading market in the dataset.

4. Sales Increase Toward the End of the Year

The sales pattern indicates stronger purchasing activity during several later months of the year, particularly September, November, and December, compared with weaker-performing months such as January, February, and April. This suggests a possible seasonal purchasing pattern, with customers becoming more active toward the latter part of the year. Further analysis could determine whether this pattern is associated with holidays, promotional campaigns, discounts, or other seasonal factors.

5. Business Is Generating Positive Profit

The business generated total profit of approximately 1,467,497 from total sales of 12,635,222

Profit Margin = $1,467,497 \div 12,635,222 \times 100 \approx 11.62\%$

Overall Business Insight

The business performance is primarily supported by technology products, strong regional markets, APAC market demand, and increased purchasing activity toward the end of the year. While the overall business is profitable, with approximately 1.47 million in profit, further investigation into product-level margins, regional profitability, seasonal sales patterns, and customer segments would help identify opportunities for sustainable revenue and profit growth.
